

ENVIRONMENTAL PROTECTION

AT ROSTOCK AIRPORT

THINK GREEN

**rostock

the baltic port

We, Flughafen Rostock-Laage-Güstrow GmbH, ensure a demand-oriented connection of the region to the national and international air traffic network and enable mobility and interconnectivity for the state of Mecklenburg-Western Pomerania.

We run our airport with conscious responsibility for our environment according to the following guidelines:

1. We are open-minded towards ecological requirements:

Our goal is to protect and preserve the environment and the natural livelihood for present and future generations. We understand environmental protection as a process of continuous improvement and we use natural resources sparingly. In our planning, we take into account processes and procedures that conserve resources and reduce the burden on air and water. We want to develop areas sparingly, protect the environment and avoid waste.

2. Emission targets:

We join the voluntary commitment of the German airports according to our financial possibilities. By 2030, we want to reduce our emissions by 50 % compared to 2010. By 2050, airports are to be operated in a climate-neutral manner. The basis of the measurement is the emissions produced by the airport itself. It is our goal to increase the energy efficiency of our facilities and buildings. We pay special attention to the continuous reduction of emissions from airport operations. A particular focus is the reduction of CO₂ emissions.

3. Assessment of environmental impacts:

It is our goal to systematically identify, document and assess those of our operational activities that have an impact on the environment.

From this, we derive targets and measures for improvements in processes and investments.

4. Protection and preservation of the natural ecosystem:

We manage our airport open areas according to the preservation of natural functions and ecological value, in addition to the requirements for aviation needs.

We are committed to compensating for the impact on nature necessitated by airport operations through compensatory and replacement measures.

5. Legal regulations:

We comply with the requirements imposed on us by environmental law. As an environmentally conscious company, we want to reduce the environmental impact associated with the operation of the airports beyond these requirements within the scope of our company's economic possibilities. In all planning and new investments, the impact on the environment is assessed and effective technologies are selected.

6. Environmental awareness:

We participate constructively in the further improvement of environmental protection in the company in our own area of activity and beyond. We pay attention to the environment, make clear to ourselves the effects of our actions and train ourselves with regard to eco-friendly behaviour.

7. The public:

We inform the public about our efforts to protect the environment. We seek open, objective and critical dialogue with neighbours, authorities as well as the public itself.
